

# PI-900 PRINTER-INSERTER

A quick, cost-effective on-demand printing solution for your tote or carton packing line.

## FEATURES AND BENEFITS

The PI-900 automates the printing, verification and dispensing of customer-specific documents featuring our unique print-ahead technology. Using upstream bar code and RFID readers, the PI-900 occupies a small space and requires very little handling.

The system features a quick Kyocera laser printer that will print docs for up to 15 orders per minute using a 4 drawer 4,000-sheet paper reserve. Each document is bar code scanned for verification. The totes are controlled using RF reader or bar code scanner. The system will print 1,800 pages per hour or handle 900 totes per hour, whichever comes first.

- Significantly reduces delays at hand pack stations
- Bar code verification and automatic dispensing reduces human error
- Small footprint and low capital investment
- Multiple paper feed trays to handle cut sheet, pre-printed forms and label stock
